

Post Implementation Evaluation Report

FHSU Administrative system – Fort Hays State University

Project Dates: 5/2001 through 6/2006

Project Cost: \$1,269,061

Project Objectives

The main business objectives were to provide secure, web-based access to student information for students and staff and to provide a functional financial system to satisfy accounting requirements and new auditing practices. The objective is to provide an easy to use system for students to access their administrative information. This information includes: viewing their class roster, viewing class catalogue information, viewing their transcript information, updating their address information, viewing their financial data, enrolling in Virtual College classes, accessing their e-mail, accessing their on-line courses, and other information in a portal environment. Other business objectives included reducing the use of paper and reengineering inefficient processes by reducing information silos.

The main business problem to be solved was providing students with user-friendly access to their (administrative) information. On the financial side the main business problem to be solved was to provide a financial system that provide all of the major functions of a contemporary financial system and would meet Gramm-Leach-Bliley and other Federal requirements.
