

# **Post Implementation Evaluation Report**

## **CMS Client Software Replacement - Investigations**

Project Dates: 8/2005 through 5/2008

Project Cost: \$538,262

### Project Objectives:

The Kansas Bureau of Investigation (KBI) wanted to deploy and maintain a new generation of software for Kansas criminal justice agencies to access the Kansas Criminal Justice Information System (KCJIS) Central Message Switch (CMS).

Kansas law enforcement and other criminal justice agencies require timely, critical information in order to provide public safety. This information is maintained in numerous Kansas databases, other states' criminal justice databases, as well as federal databases. The Kansas Central Message Switch (CMS) is interfaced with various networks and databases to supply this information.
