

## **Post Implementation Evaluation Report**

### **Unified Security Appl Platform Deployment – Univ of Kansas**

Project Dates: 1/2005 through 7/2005

Project Cost: \$241,736

#### Project Objectives

The University of Kansas is faced with a very decentralized environment. With over 20 physical firewalls dispersed throughout the organization, managing and maintaining those firewalls have been an issue.

The IT Security Office set out to find a solution to consolidate as much of the firewall infrastructure as possible, while still securing the specific assets behind the existing firewalls.

The other objective was role based management.
